Derek,

The maps are 1229 on the west and 1231 on the east end. The map shows the flow from east to west and out falling into the inlet as I suspected. This SD system is shown in blue meaning it is owned and maintained by the Alaska Department of Transportation. So the majority of the flow path is owned by ADOT and the last section including the outfall is owned by the Municipality of Anchorage. If there is a pollution issue please let us know. Normally the owner of the outfall/MS4 permittee is contacted and held to some level of responsibility for at least cleaning the SD system of pollutant.
